

Research Experience

American Legislative Politics

Research Assistant | [Prof. Fred Gui](#), Louisiana State University

July 2026 – Present

Keywords: American legislative politics; revolving-door laws; political institutions; legislative behavior

I assist with a research project examining how U.S. revolving-door laws affect legislators and legislative behavior. My work focuses on collecting, organizing, and cleaning data related to state-level legal and political institutions.

Main Contributions

- Collected and cleaned data on U.S. revolving-door laws and related institutional rules.
 - Organized state-level legal and political information for empirical analysis.
 - Developed a stronger research interest in the relationship between institutional design and legislative behavior.
-

Political Economy History and AI for Research

Research Assistant | [Prof. Weiwen Yin](#), University of Macau

November 2025 – Present

Keywords: political economy; AI for Research; prompt engineering; reproducible research; causal inference

I work on projects related to political economy history and AI-assisted social science research. My responsibilities combine literature mapping, research workflow design, and structured data extraction from historical materials.

Main Contributions

- Translated political economy articles and reproduced formula-intensive materials in R Quarto.
 - Designed structured prompts in Google AI Studio to extract information from historical archives.
 - Surveyed scholarly articles, GitHub repositories, public databases, and other resources on AI-assisted social science research.
 - Participated in graduate-level causal inference training and applied methodological concepts to ongoing empirical research.
-

Economic History and AI-Assisted Data Engineering

Research Assistant | Project led by [Prof. Pei Gao](#) and [Prof. Yu-Hsiang Lei](#)

June 2025 – Present

Project: The Persistent Impact of Historical Conflicts in China

Keywords: economic history; historical conflicts; local gazetteers; structured data engineering; LLM-based extraction

I serve as the primary undergraduate coordinator at the University of Macau for an economic history project on the persistent impact of historical conflicts in China. The project involves constructing village-level historical datasets from gazetteers and local chronicles.

Main Contributions

- Helped build a standardized 33-variable village-level coding framework.
 - Identified and coded variables from historical gazetteers and local chronicles, including population, religious institutions, infrastructure, migration, education, and institutional features.
 - Designed and refined large language model prompts for structured information extraction from raw TXT sources.
 - Contributed to a scalable TXT–JSON–CSV data transformation pipeline.
 - Modified Python scripts for splitting digitized PDF books and supported automated PDF segmentation for batch processing and validation.
-

Regional Collaborative Governance and Social Network Analysis

Research Assistant | [Prof. Shuwen Zhang](#), University of Macau
Summer 2026

Keywords: public administration; collaborative governance; regional governance; social network analysis; intercity cooperation

I worked on a project studying regional collaborative governance across the Greater Bay Area, the Beijing–Tianjin–Hebei region, and the Yangtze River Delta. The project focuses on intercity cooperation, policy coordination, and institutional arrangements.

Main Contributions

- Identified and organized variables related to collaborative urban governance.
 - Constructed preliminary city-level and dyadic data structures to capture intercity collaboration ties.
 - Conducted social network analysis in R to examine network structure, centrality, and cross-city connectivity.
 - Strengthened my interest in public administration, collaborative governance, and network-based approaches to institutional analysis.
-

Research Training and Academic Activities

Social Science Research Seminar

Participant | [Prof. Tao Li](#), Hong Kong Metropolitan University
Present

I participate in a faculty-led seminar on empirical strategies and research design. The seminar focuses on causal reasoning, theoretical framing, identification, and research design across political science, economics, and public policy.

[Micro Theory Reading Group](#)

Participant | Department of Economics, University of Macau
Present

I participate in a department-level reading group on advanced microeconomic theory, led by [Prof. Inácio Bó](#) and [Prof. Lawrence Choo](#). The reading group engages with classical and contemporary literature in microeconomic theory.

Research Skills Developed

Substantive Areas

- American legislative politics
- Electoral politics
- Political institutions

- Public administration
- Comparative political economy
- Economic history
- Regional collaborative governance

Methods and Tools

- Causal inference
- Quantitative text analysis
- Social network analysis
- Historical data extraction
- Structured data engineering
- Prompt engineering
- Python
- R
- R Quarto
- Regular expressions
- Machine learning tools
